Tap the pen in the exact center of each of the calibration markers. **NOTE** Be sure to calibrate the pen for use in both portrait and landscape display orientations. Using the Pen Like a Mouse You can use the pen with your TabletPC the same way you use a mouse or touch pad with a notebook computer. When you hold the pen near the display, you see a small cursor. This tutorial provides pen training. Entering, Editing, and Erasing Text With the Pen The handwriting recognition software makes it easy to enter text into your applications with the pen. Some applications, such as Windows Journal, allow you to write with the pen directly into the application window. When an application does not directly support pen input, you can use the TabletPC Input Panel to enter text into your application. If you tap in an editable area, the TabletPC Input Panel icon appears. Tap the icon and the Input Panel slides out from the edge of the display. You can also open the Input Panel by tapping the Input Panel tab, which is docked at the edge of the screen when the Input Panel is hidden. The Input Panel allows you to enter and edit text in different modes.

Edit text in the Input Panel using gestures, such as lining through text you want to delete, or tapping buttons. Erase text in the Input Panel using the erase pen button, or by lining through text you want to delete. Pen flicks are quick, directional gestures; you quickly draw a short line in one of

eight directions. When a pen flick is recognized, the TabletPC performs the action assigned. The default assignments for the diagonal pen flicks are editing actions delete, copy, paste, and undo. You can choose to turn pen flicks off, use the navigational pen flicks only, or use the navigational and editing pen flicks. You can also assign a new action to any of the eight pen flicks and adjust how easily your pen flicks are recognized. Setting Pen Preferences You can customize several pen behaviors in the operating system to help make using your TabletPC more comfortable. For example, if your doubletaps are sometimes not recognized because you do not tap them fast enough, you can set a slower speed so that you have more time to tap. In Windows Vista, you can customize the visual feedback that displays for each type of tap, and you can customize the actions assigned to pen flicks. Setting Pointer Device Mouse Preferences Pointer device preferences, such as pointer speed, click speed, and pointer mouse trails, are set in the Mouse Properties window. These preferences apply to any pointer device in the system. Using Touch Your TabletPC is able to distinguish between the pen and your fingertip touch mode. When you use touch mode, a translucent image of a computer mouse, called the touch pointer, floats beneath your finger. The touch pointer has left and right mouse buttons that you can tap with your finger. You use the area beneath the buttons to drag the touch pointer. If the pen is not within range, doubletap the display with your finger to enter touch mode.

To access the digitizer utility from the Windows Notification area and set the input mode, rightclick in Windows Vista or in Windows XP, click Properties, and then click the Digitizer Options tab. Click the radio button for the input mode you want to set, and click Apply. QuickSet NOTICE If you uninstall QuickSet from your TabletPC you will also delete the tablet button drivers. To reinstall QuickSet and the tablet button drivers, go to [support.dell.com](http://support.dell.com). QuickSet gives you easy access to settings and controls for customizing your TabletPC. You can access Dell QuickSet from the QuickSet icon in the Windows Notification area or through the Windows Mobility Center. Depending on what you want to do, you can start QuickSet by either clicking, double clicking, or right clicking the QuickSet icon in the Windows Notification area. The Windows Notification area is located in the lower right corner of your screen. Clicking the QuickSet Icon NOTE The following features may not be available on certain computers. Control Panel To access the Control Panel, click Start or Start in Windows XP and then click Control Panel. The Control Panel contains several categories of tasks for managing your TabletPC. Clicking each category displays more information. To display these tasks as task icons, click Switch to Classic View in Windows XP or Classic View in Windows Vista. Help and Support To access Help and Support, click Start or Start in Windows XP and then click Help and Support. Help and Support provides information for understanding how to manage your TabletPC. Windows Vista Mobility Center The Windows Mobility Center contains a set of tiles through which you can configure settings on your computer. There are additional tiles that have been customized by Dell. You can access the Windows Mobility Center using any of the following methods book.

Using a Battery CAUTION Using an incompatible battery may increase the risk of fire or explosion. Replace the battery only with a compatible battery purchased from Dell. The battery is designed to work with your Dell TabletPC. Do not use a battery from other TabletPCs with your TabletPC. CAUTION Do not dispose of batteries with household waste. When your battery no longer holds a charge, call your local waste disposal or environmental agency for advice on disposing of a lithiumion battery. CAUTION Misuse of the battery may increase the risk of fire or chemical burn. Keep the battery away from children. Handle damaged or leaking batteries with extreme care. Damaged batteries may leak and cause personal injury or equipment damage. Battery Performance NOTE For information about the Dell warranty for your TabletPC, see the Product Information Guide or separate paper warranty document that shipped with your TabletPC. One battery is supplied as standard equipment in the

battery bay. book.book Page 73 Tues day, May 13, 2008 503 PM For best results, operate the TabletPC with the AC adapter until the battery is fully charged. Battery operating time varies depending on operating conditions. NOTE Battery operating time the time the battery can hold a charge decreases over time. Depending on how often the battery is used and the conditions under which it is used, you may need to purchase a new battery during the life of your TabletPC. NOTE It is recommended that you connect your TabletPC to an electrical outlet when writing to a CD or DVD. You can check the battery charge before you insert the battery into the TabletPC. You can also set power management options to alert you when the battery charge is low.

For more information about QuickSet, rightclick the QuickSet icon in the Windows Notification area, and click Help. Power Meter The Power Meter indicates the remaining battery charge. To check the Power Meter, move your cursor over the Power icon in Windows Vista and in Windows XP in the Notification area to display the Power icon popup. If the computer is connected to an electrical outlet, the Power icon popup displays the plugged in charging message. After hundreds of charge and discharge cycles, batteries lose some charge capacity—or battery health. Check the Battery Charge To check the battery charge, press and release the status button on the battery charge gauge to illuminate the chargelevel lights. Each light represents approximately 20 percent of the total battery charge. For example, if the battery has 80 percent of its charge remaining, four of the lights are on. If no lights appear, the battery has no charge. book.book Page 75 Tues day, May 13, 2008 503 PM For information about QuickSet, rightclick the icon in the Windows Notification area, and click Help. To check the battery health using the charge gauge, press and hold the status button on the battery charge gauge for at least 3 seconds. If no lights appear, the battery is in good condition, and more than 80 percent of its original charge capacity remains. Each light represents incremental degradation. If five lights appear, less than 60 percent of the charge capacity remains, and you should consider replacing the battery. LowBattery Warning NOTICE To avoid losing or corrupting data, save your work immediately after a lowbattery warning. Then connect the TabletPC to an electrical outlet, or dock the TabletPC onto an optional battery slice. If the battery runs completely out of power, hibernate mode begins automatically. A popup window warns you when the battery charge is approximately 90 percent depleted.
